

LangGraph State And Nodes

Graph flow

flowchart TD

```
start([Webhook event stored])
N1[Node01: detect VA and extract all issues]
N2[Node02: fetch repo files and plan BOM-friendly fixes]
N3[Node03: validate BOM safety and finalize change plan]
Decision{Validation passed?}
N4[Node04: create branch, push files, create PR]
Review[Manual review required]
End([Run completed])
```

```
Start --> N1
N1 --> N2
N2 --> N3
N3 --> Decision
Decision -- Yes --> N4
Decision -- No --> Review
N4 --> End
Review --> End
```

State transition view

stateDiagram-v2

```
[*] --> received
received --> parsed_issues
parsed_issues --> manifests_fetched
manifests_fetched --> plan_drafted
plan_drafted --> validated
plan_drafted --> manual_review_required
validated --> pushed
validated --> push_failed
```

```
manual_review_required --> [*]  
pushed --> [*]  
push_failed --> [*]
```

Node I/O contract

flowchart LR

In[Graph input state]

N1[Node01]

N2[Node02]

N3[Node03]

N4[Node04]

Out[Final state]

In -->|console_text event metadata| N1

N1 -->|issue_list general_solutions| N2

N2 -->|repo_files remediation_candidates| N3

Recommended state slices by node

Node 01 writes

- va_detected
- issue_list
- issue_summary
- general_solutions
- scan_targets

Node 02 writes

- repo_files
- manifest_context
- remediation_candidates
- selected_change_plan_draft

Node 03 writes

- validated_change_plan
- validation_passed
- validation_notes
- manual_review_required

Node 04 writes

- branch_name
- changed_files
- pull_request_url
- final_status
